Personalized Therapy for CRPS

Living with the intense pain of Complex Regional Pain Syndrome (CRPS), you’ve probably tried a range of pain management methods. Too often, these treatments are ineffective or have unpleasant side effects.

Boston Scientific’s Spectra WaveWriter™ SCS System offers a proven, drug-free alternative that can provide effective, long-term relief tailored to your own personal pain.

And because the Spectra WaveWriter SCS System uses an established SCS procedure, you may be able to avoid complications associated with alternative methods.*

Talk to your pain management specialist about Boston Scientific’s SCS therapy.

4. North, J. et al., (2021), Intractable Low Back Pain and Leg Pain. Associated conditions and etiologies may be: idiopathic low back pain, leg pain, sciatica, radiculopathy, herniated disk, degenerative disk disease, trauma, myelopathy, multiple back surgery. Contraindications: The Spinal Cord Stimulation systems are not for patients who are unable to operate the system, have failed prior stimulation by failing to receive effective pain relief, or have a surgical risk, or are pregnant. Patients implanted with the Precision Montage™ MRI, Precision Spectra™, or Spectra WaveWriter™ Spinal Cord Stimulation System with ImageReady™ MRI Technology are “MR Conditional” only when exposed to the MRI environment under the specific conditions defined in the ImageReady MRI Full Body Guidelines for Precision Montage MRI Spinal Cord Stimulation System and ImageReady MRI Guidelines for Precision Spectra Spinal Cord Stimulation System (Head Only MRI scans). The Precision Montage MRI SCS System provides safe access to Full Body MRI Scans only when used with the Avista MRI leads and exposed to the MRI environment under the specific conditions defined in the ImageReady MRI Full Body Guidelines for Precision Montage MRI Spinal Cord Stimulation System. Warnings: Patients implanted with Boston Scientific Spinal Cord Stimulator Systems without ImageReady Technology should not be exposed to Magnetic Resonance Imaging (MRI) Exposure to MRI may result in dislodgement of the stimulator or leads, heating of the stimulator, severe damage to the stimulator electronics and/or uncomfortable or jolting stimulation. A Spinal Cord Stimulation patient, you should not have the device on or near a medical condition or as part of a surgical procedure. During a medical emergency, such as a power failure or if the detectors systems, you can potentially turn on the stimulator off, or cause uncomfortable or jolting stimulation. The system should not be charged while sleeping. The Spinal Cord Stimulator systems may interfere with the operation of implanted sensing stimulators such as pacemakers or implanted cardiac defibrillators. Advise your physician that you have a Spinal Cord Stimulator before going through with other implanted sense therapies so that medical devices can be made and appropriate safety measures taken. Patients should not operate motorized vehicles or potentially dangerous machinery with the operation of the stimulator switched “on.” Your doctor may be able to provide additional information on the Boston Scientific Spinal Cord Stimulation systems. For complete indications for use, contraindications, warnings, precautions, and side-effects, call 1-866-360-4747 or visit ControlYourPain.com. Caution: U.S. Federal law restricts this device to sale by or on the order of a physician. All trademarks are the property of their respective owners.

Spinal Cord Stimulation for CRPS

CRPS usually occurs in a particular area—your foot, your knee, your groin, or your hip. Targeting your precise pain area is key to finding effective relief.

The Spectra WaveWriter SCS System features advanced software and leads with up to 32, individually controlled contacts—more than any other SCS system.

This means:

The Spectra WaveWriter SCS System is designed to be able to be programmed to find your unique pain relief “target.”

The programming can be adjusted to maintain therapy in the right spot over time, even if the target moves.

Multiple Therapies. One Device.

Spinal Cord Stimulation (SCS) works by sending mild electrical pulses (delivered in “waveforms”) to interrupt pain signals before they reach your brain.

The Spectra WaveWriter™ SCS System can deliver more kinds of waveforms than any other SCS system.

This is important because:

Different people respond better to different waveforms. By offering multiple options, the Spectra WaveWriter SCS System may have a better chance of finding the right therapy for your personal pain.

Your pain may change over time. Being able to adapt your therapy to these changes can help provide effective, long-term relief.
